

```
```sh
sudo -s
```
```

```
```sh
hostnamectl set-hostname tf
```
```

```
```sh
cat <<'EOF' > tf.sh
1. Update system package manager
sudo yum update -y

2. Install yum utilities (for repo management)
sudo yum install -y yum-utils

3. Add official HashiCorp repository for Amazon Linux
sudo yum-config-manager --add-repo
https://rpm.releases.hashicorp.com/AmazonLinux/hashicorp.repo

4. Install Terraform binary
sudo yum install -y terraform

5. Verify Installation (Check version)
terraform version
EOF
```

```
clear
```
```

```
```
Sudo -i
```
```

Attach Terra role to ec2 instance where tf is installed.

```
vi tf.sh
```

```
cat <<EOF > tf.sh
#!/bin/bash
